

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): An image data processing system comprising:  
a digital camera having a camera section for converting a light from a substance  
to be recorded into an image data, and a first memory section for storing said image data  
therein;  
*AJ CMV*  
first processing means, for storing processing the image data, provided outside  
said digital camera and having a second memory section for storing said image data  
therein;  
second processing means for processing said image data in accordance with  
instructions from said first processing means;  
communication apparatus having communication sections which transmit and  
receive data, said communication sections being provided for said digital camera, said  
first processing means and said second processing means, and communication circuits for  
connecting said communication sections to each other; and  
instruction means for giving instructions on processing to be executed by said first  
processing means from said digital camera.

2. (original): The image data processing system according to Claim 1, wherein, said second processing means includes a print section for printing the image.

3. (original): The image data processing system according to Claim 2, wherein said second processing means includes a third memory section for storing the image data.

4. (currently amended): The image data processing system according to Claim 3, wherein the system includes a plurality of said second processing means, and said digital camera includes selecting means for selecting said second processing means.

*AJ Conk*  
5. (currently amended): A digital camera comprising:

a camera section for converting a light from a substance to be recorded into an image data;

a memory section for storing said image data therein;  
instruction means for instructing processing means on processing to be executed disposed outside the digital camera, and the processing means having a second memory section for storing said image data therein; and

a connecting section for connecting with a communication circuit capable of transmitting the instructions from said instruction means and said image data.

6. (currently amended): A processing device for executing processing in accordance with instructions from a digital camera provide-provided outside, comprising:

reception means for receiving the instructions from said digital camera;  
a memory section for storing image data transmitted from said digital camera; and  
output means for outputting said image data to an external processing device  
disposed outside in accordance with the instructions from said digital camera that have  
been received by said reception means.

*for*  
*cancel* 7. (new): The image data processing system of claim 1, wherein the digital camera

comprises the instruction means.

8. (new): The image data processing system of claim 1, wherein the first processing  
means communicates directly with the digital camera.

9. (new): The digital camera of claim 5, wherein the instruction means communicates  
directly with the processing means.

10. (new): The processing device of claim 6, wherein the reception means communicates  
directly with the digital camera.
